
4cast test in html

Posted by Ernie - 2004/07/16 12:48

Mornin' all. This is my 2st 4cast, so feel free to make suggestions (no name calling) - I've cobbled it together from a variety of sources to save u a bit of time in the morning. Hopefully it'll prove reasonably accurate but I'm not giving any guarantees and can't be held responsible for windless days off work sitting in west kirby car park.

General for the w/e - not so good unless you've got a really big sail 7m + or kite. Pos good w/e for kitesurfing with big kite due to decent high tide at reasonable time.

Windguru and theyr are in quite good agreement for this w/e.

Friday

Kirby - Force 2 SW - bit cloudy but not too bad. tide 11:21 , 7.98m

Rhossy - F 3 SSW - cloudy - no rain

A'soch - F 3 SSW - cloudy - no rain

Sat

Kirby - F2/3 SW most of the day. tide midday , 8.13m

Rhossy - F3 SW most of the day.

A'soch - same as Rhossy

However, the proudman lab (usually spot on) 4cast shows F4 NW at Rhossy and a'soch ! Also, If you get to Rhossy really early (about 7am till 10) you'll be looking at force 5 - 7 SSW, although it'll swing round to the W & NW and decrease through the day.

Sun - no rain!

Kirby - Force 2 SW - light cloud tide 12:34 , 8.23m

Rhossy - F 3 SSW - light cloud

A'soch - F 3 SSW - light cloud

Next week

Wind turning S, remaining about F2. Max wind is on tuesday late afternoon/ evening SSE 15kts at Rhossy if yer lucky.
